Managed Exposure Defence: One Programme for the Entire Response Loop

Business Challenge

In April 2026, Anthropic's Project Glasswing deployed, trained, and tested a frontier AI model to find critical vulnerabilities, which surfaced thousands of previously unknown flaws across every major operating system and browser, some undetected for decades. Vendors are now racing to patch on a controlled disclosure schedule, triggering a coordinated patch wave unlike anything the industry has seen.

For most organisations, the challenge isn't awareness – it's capacity. AI-assisted exploit development has compressed the weaponisation window from days to hours. Security teams are already stretched thin, with no dedicated patch operations function and no surge bench to draw on. Regulators expect demonstrable response to a known event. Boards are already asking questions. And the threat cannot wait for lengthy procurement cycles or disconnected vendor relationships.

Our solution

Insight Managed Exposure Defence is a bundled managed service purpose-built for this moment – combining five integrated capabilities into a single programme that moves organisations from exposure to protected environment at the speed the threat demands. Rather than coordinating disconnected point tools and separate vendors, organisations get end-to-end coverage of the entire vulnerability response loop with unified accountability.

The programme can be scoped and priced within 24 hours of first contact and scales from 100 managed assets to large enterprise scale without custom buildout – delivering immediate operational relief regardless of organisation size.

Features & Benefits

One contract. One team. One answer.

Insight covers all five stages of the response loop with a single delivery team. No accountability gaps between vendors. No coordination overhead.

Scoped and priced in 24 hours

From first conversation to a protected environment without the lengthy procurement cycles the threat cannot wait for.

Scales from 100 assets to enterprise

Out-of-the-box delivery at any size – no custom buildout required, no minimum engagement complexity.

Compliance-ready by design

Aligned to major regulatory frameworks NIS2, DORA, GDPR etc. Audit trail built-in from day one.

Outcome

With Insight Managed Exposure Defence, the mindset shifts from "How do we respond?" to "It's already handled." Organisations gain immediate operational relief from a threat that exceeds internal capacity, a defensible posture record that satisfies regulators and boards, and the confidence that comes from knowing a single partner owns the full response.

Five stages. One Insight.

The bundle is the differentiator.

We deliver in every stage of the response loop: exposure detection, software supply-chain visibility, ops-side remediation, code-side remediation, and exploit detection and containment, on a single contract, with a unified delivery team.

Managed CTEM

Continuous scanning across endpoints, cloud, identity, and applications – delivering a real-time, risk-ranked exposure map. The foundation the entire response depends on.

Software supply chain & OSS risk

SBOM generation, open source dependency monitoring, and vendor contractual posture reviews. Visibility into what's inside what you run.

Managed patch

Enterprise-scale patch operations across Windows®, Linux®, hypervisors, and the database tier. Change-managed deployment with test rings, rollback, and a time-stamped audit trail.

Managed XDR

24/7/365 detection, triage, and response from a global SOC across the U.S., UK, India, and Manila. The safety net when patches lag.

Software developer outsourcing

Surge engineering capacity for dependency upgrades, library refactors, and custom application remediation. Code-level exposure closed without freezing your product roadmap.

Looking to go further?

GRC Assessment

Evaluate your organisation's governance, risk, and compliance posture across major industry frameworks, identifying gaps and building a clear path to audit readiness.

Penetration Testing & Continuous Pen Testing

Achieve proactive validation of your security posture through simulated attack scenarios – confirming that patches and controls are working as intended.

Managed AI Governance

Enables organisations to scale AI responsibly by providing continuous visibility, governance insights, and actionable recommendations across usage, agents, identities, and cost.

Why Insight?

Insight Enterprises is a leading Solutions Integrator that helps clients solve technology challenges by combining the right hardware, software, and services. As a Fortune 500 technology company, backed by 35+ years of expertise and a deep network of 6,000+ partners, we deliver secure, end-to-end IT solutions for organisations around the world.
