

Advanced security from the inside with VMware NSX®

“ ..We used to only think about the perimeter. Now we’re securing the data center from the inside.”

QUESTION

Is your east-west traffic secure enough?

You’ve secured the perimeter of your data center.

That’s a great start

But what about threats that infiltrate the data center, lie dormant and then attack your critical systems from inside or within?

\$3.79M

The average cost of a corporate data breach in 2015*
(*Ponemon Institute)

MICRO-SEGMENTATION (security from the inside)

A new way to implement data center security.

Now

Fine-grained policies and network controls to enable security inside the data center.

All You Need Is:

VMware NSX, a network virtualization platform that delivers advanced security.

Which Runs With Your Existing:

Computer and networking infrastructure

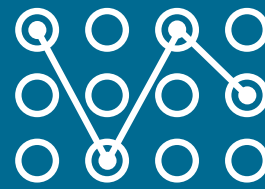

Applications

Security products

And You’ve Got All This To Gain:

- Flexible policies tied to each workload
- Fully streamlined operations and centralized control
- Flexibility of an all software solution

VIRTUAL NETWORKS (progressive thinking)

VMware NSX helps companies like yours handle growth in server-to-server traffic, delivering improved security, performance and reliability to your existing network.
