

# Microsoft Surface Devices for the New Era of Healthcare

Reimagine virtual care and transform the patient  
journey with modern devices.

Insight 

Microsoft Surface

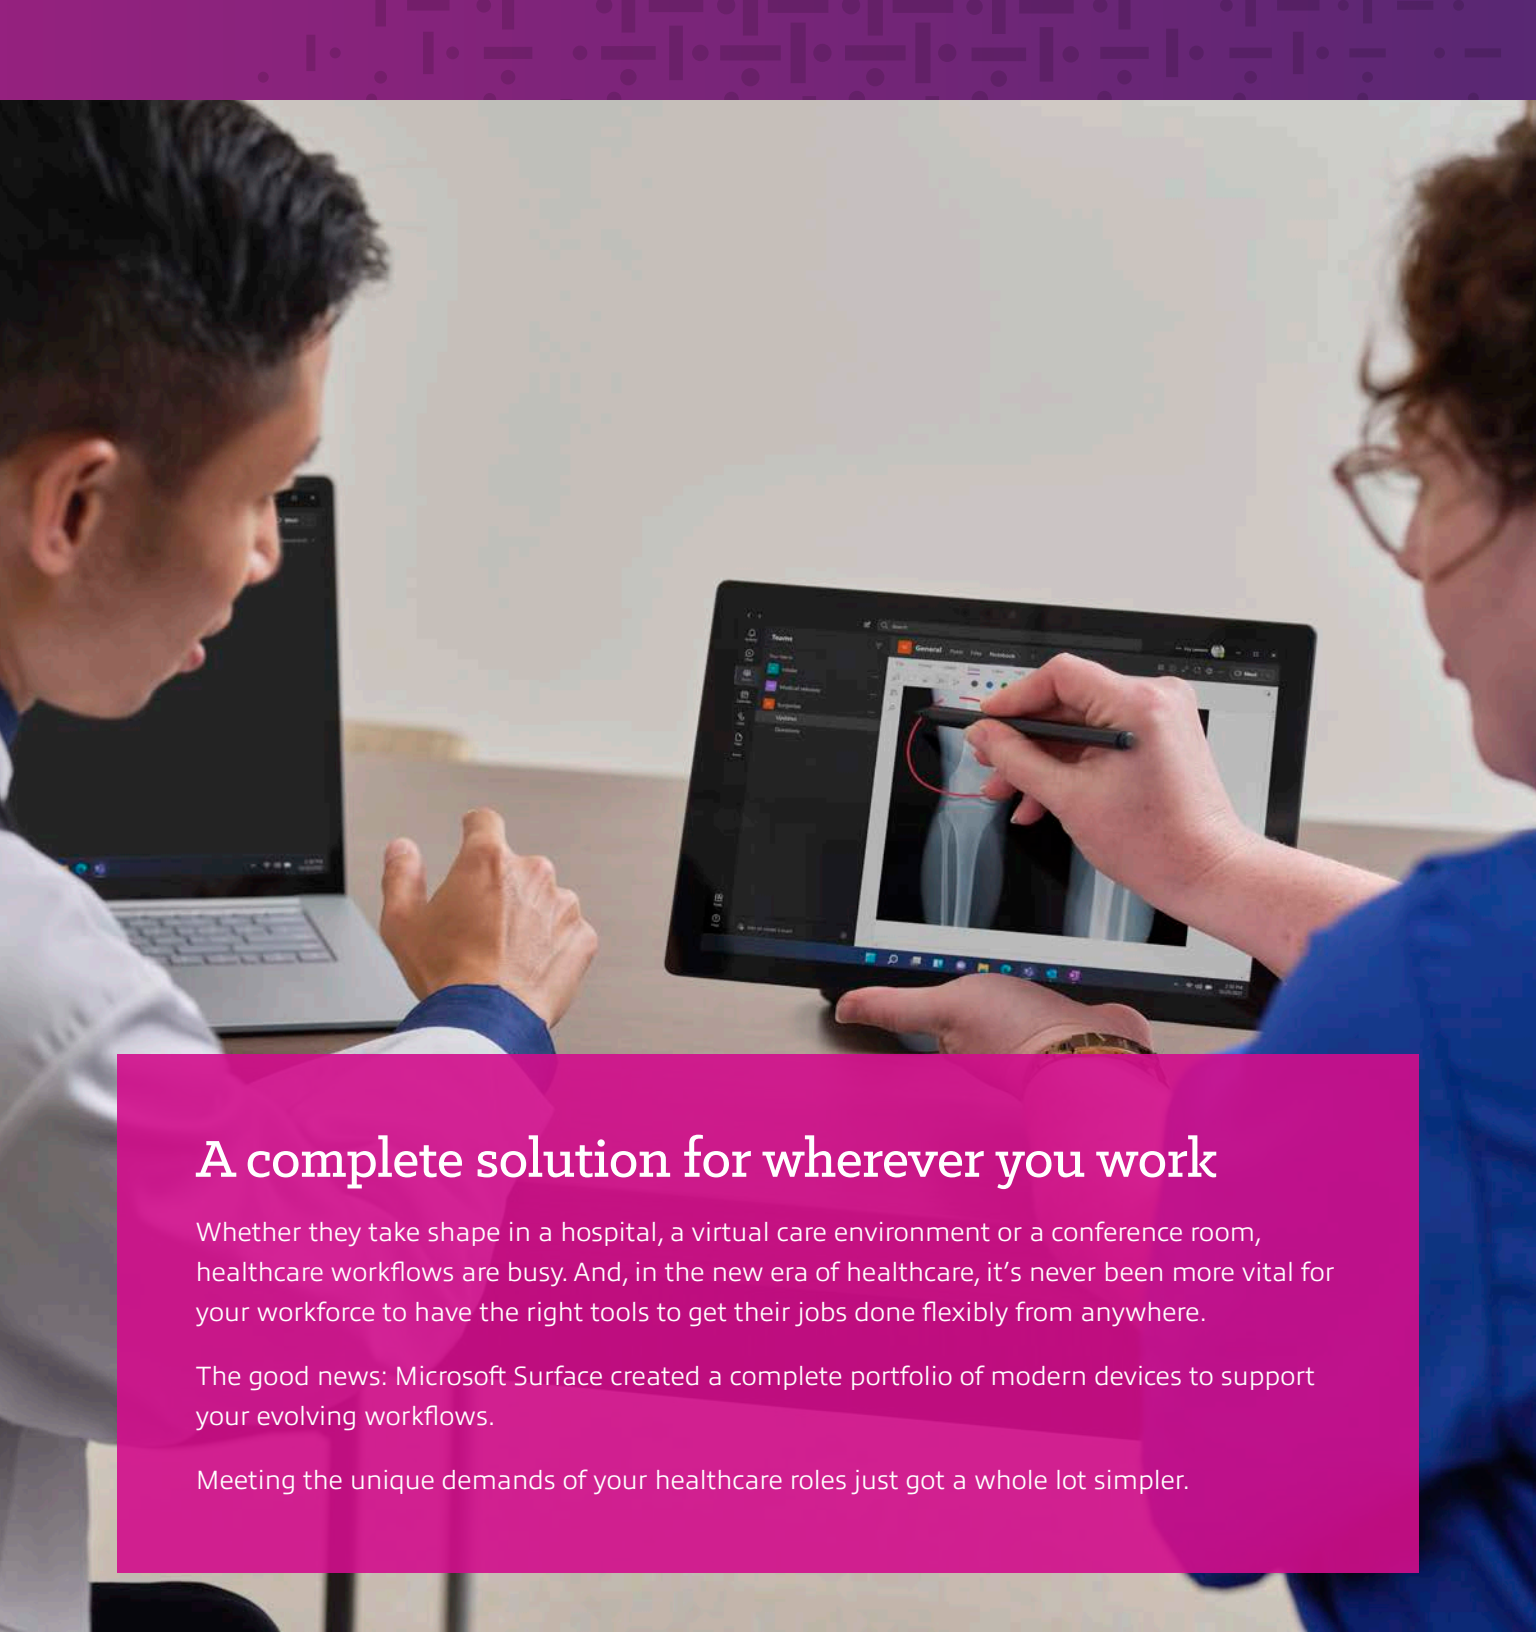

## Digital transformation in healthcare

New innovations are driving digital transformation in healthcare, from virtual patient consultations and digital hospital rounds to hybrid deployment and stronger cybersecurity for patient data protection.

As a result, the industry is seeing a drastic shift in how workers collaborate with teammates and connect with patients. To make the most of these changes, healthcare staff need scalable technology solutions that enable seamless communication with team members and patients, easy reviewing of information and protection for important documents.

Let's take a look at how versatile devices from Microsoft Surface help front-line healthcare workers thrive during this era of digital transformation.

## A complete solution for wherever you work

Whether they take shape in a hospital, a virtual care environment or a conference room, healthcare workflows are busy. And, in the new era of healthcare, it's never been more vital for your workforce to have the right tools to get their jobs done flexibly from anywhere.

The good news: Microsoft Surface created a complete portfolio of modern devices to support your evolving workflows.

Meeting the unique demands of your healthcare roles just got a whole lot simpler.

## Superior hardware for superior collaboration

Dated office equipment makes it difficult to provide a modern experience for both patients and employees — and the thought of an upgrade can be daunting. But the benefits are worth it: Modern hardware makes it easier for care staff to collaborate with features such as crystal-clear meeting audio, reliable calling and intuitive applications.

Built with the resiliency needs of healthcare organizations and their dynamic teammates in mind, Microsoft Surface® devices feature high-performance hardware that streamlines workflows, reduces the burden on IT, and supports patient and data confidentiality.

By adopting future-ready devices, you'll be able to communicate more effectively with teammates and patients and simplify your busy workdays.

# Get ready to embrace Autopilot.

Imagine being able to deploy and manage devices from anywhere.

With zero-touch Autopilot deployment on Surface devices, you'll unlock fully modern management. In concert with cloud policies, your IT team can quickly deploy, manage and maintain devices, making implementation painless and straightforward — even in hybrid and remote settings.

## Key benefits include:

- Ability to manage your IT environment remotely
- Reduced complexity and costs
- Retained Solid-State Drives (SSDs) to ensure data privacy and compliance
- Improved repair processes

Above all, Windows® Autopilot reduces workday disruption and shortens IT help desk call times, so staff can work more efficiently and stay focused on patients.

## Chip-to-cloud security

The shift to virtual care has made healthcare one of the biggest targets for cyberattacks. Patient information, medical devices, outdated technology vulnerabilities and an increasing reliance on remote network access all give cybercriminals more opportunities to attempt their next attack.

Safeguarding healthcare data with cloud-based security has never been more critical. But, the high performance and multi-layered protection of Surface devices includes built-in, chip-to-cloud security that shores up your cyberdefense and safeguards patient information.

Organizations that use Surface devices report reduced security incidents, thanks to features such as:

- Protection from chip to cloud
- Easy and secure sign-in
- Minimized risk

Trusted technology solutions from Insight and Microsoft Surface work together to defend against cyberattacks and meet privacy, security and compliance requirements.

## Your trusted technology partner

As healthcare organizations seek opportunities to thrive in a digitally transformed world, Insight unlocks their full potential with technology solutions that enhance the patient experience without putting essential data at risk, including Microsoft Surface® devices.

We'll help you reimagine healthcare with transformative technology. Talk with an Insight expert today to see which Microsoft® Surface solutions are best for your organization.

# About Insight

Insight Enterprises, Inc. is a Fortune 500 solutions integrator helping organizations accelerate their digital journey to modernize their business and maximize the value of technology. Insight's technical expertise spans cloud and edge-based transformation solutions, with global scale and optimization built on 33+ years of deep partnerships with the world's leading and emerging technology providers.
