

# Octopus Cloud SPLA Manager

Immerse yourself in the world of SPLA automation and minimise your compliance risks in the process.

**The Octopus Cloud SPLA Manager consists of three components which ensure that your SPLA usage reports are always correct and are generated to save time.**

The OC SPLA Manager will keep the time you spend creating your SPLA usage report to a minimum. With our customised and automated inventory solution, we create clarity on the servers, the installed software and when determining the access-authorized users on each SAL-based application such as Exchange, Office, etc.

## Features

### Automated inventory taking

The OC Scanner automatically collects all SPLA-relevant hardware, software and user information from your infrastructure, and can also generate agentless or agent-based.

### End customer reports

Generate an SPLA usage report for each customer. This means you will never lose sight of which customer uses how many licences on which server. You can also use these reports for customer billing.

### Audit trails

The OC Reporter saves all activities in its infrastructure. This simplifies traceability in the event of changes or ambiguity. It also provides you with a huge level of security and you can easily display these activity logs during audits.

### Up to date with SPUR

The OC Intelligence is continuously maintained by us and always quickly adapts in the event of SPUR changes. This means that you will always create your SPLA usage report with latest SPUR changes.

### Cost Optimization

The Octopus Cloud SPLA Manager calculates the cost coverage points for your different licensing options (SAL / CPU / Core). Your report is always optimized for the lowest total cost of ownership (TCO).

### SPLA usage reports

Generate your SPLA report with just a few clicks. Find the best licensing opportunity for you and let your SPLA reseller know about it.

# The well-thought out SPLA solution

## How the OC SPLA Manager works

- 1 Collect your server infrastructure data with the OC Scanner**

Collect the required software and hardware information automatically using the OC Scanner either agentless or agent-based, cross-domain or by each domain.
- 2 The collected inventory data is auto-imported into the OC Reporter**

The OC Reporter visualises the collected data from the OC scanner in a user-friendly way, while displaying important notes and alerts and preparing export functions for the inventory data.
- 3 Generate your SPLA usage report with one click**

The OC Intelligence ensures using its complex algorithms that the correct licences are always calculated. Optimisations are also made to cut your licence costs.

## The benefits for you

You will reduce licence compliance risks and minimise your costs for creating reports. With our intelligent logging options, you will also be prepared for potential audits. You can focus on your core business; the Octopus Cloud SPLA Manager automatically manages your SPLA usage reports.

## Still not convinced?

Then arrange a non-binding appointment for a demo right away.

One other thing: the OC SPLA Manager is KPMG certified as want to ensure that the accuracy of our intelligence and that calculation of the SPLA licences was confirmed by KPMG.
