SOLUTION BRIEF

Accelerating Business Transformation in the Cloud with CloudHealth

Scale Intelligent Business Decisions

CloudHealth is the most trusted software platform for accelerating global business transformation in the cloud.

Thousands of customers around the world depend on CloudHealth to simplify financial management, streamline operations, and strengthen security and compliance.

Key benefits

INCREASE AGILITY

Deliver higher quality products and solutions faster, while keeping costs under control and reducing complexity. With complete visibility into spend, you can confidently control your cloud journey.

IMPROVE COLLABORATION

Align business units and departments to make decisions faster. Drive consistent best practices throughout your organization for increased productivity, improved collaboration, and communication.

DRIVE INNOVATION

Spend more time on innovation, less time on menial tasks. With CloudHealth, you can set guardrails to be notified, or take automated action, when infrastructure violates policy.

Who is CloudHealth for?

- Finance
- It Ops / Tech Ops / Cloud Ops
- Engineering / App Dev
- C-Level Executives

Business transformation value

CloudHealth is an independent third-party solution that provides robust functionality and optimization across your entire environment—on-premises, public, hybrid, or multicloud.

CLOUD READINESS

Move faster in your cloud migration process by understanding the total cost of ownership for migrating assets to the cloud of your choice.

CLOUD FLEXIBILITY

Align business context to data and make decisions faster with granular visibility and customizable reporting across your multicloud environment.

FINANCIAL MANAGEMENT

Continuously analyze and report spend by cost center, drive accountability against budgets, and find opportunities to lower your cloud spend.

INFRASTRUCTURE OPTIMIZATION

Improve resource utilization, eliminate waste, and take advantage of cloud provider pricing discounts to reduce operational costs.

OPERATIONAL EFFICIENCY

Drive employee productivity with self-service reporting, dashboards, and APIs to manage your data and discover trends.

GOVERNANCE & AUTOMATION

Drive consistent governance best practices throughout your organization by implementing policies that automate daily operations.

SECURITY AND COMPLIANCE

Improve your cloud security posture and proactively mitigate security threats by correlating misconfigurations and malicious activity across distributed teams.

> *"CloudHealth can be used by people who understand business needs, and by those who understand technology."*
>
> **SANDEEP KULKARNI** | Vice President of Information Technology, Icertis

> *"There's a common industry saying that 'no one ever got fired for buying IBM.' That's how we feel about CloudHealth."*
>
> **TRISTAN GREAVES** | Group AWS Programme Manager, Stepstone

> *"Prior to CloudHealth, we had been reactionary, but we are now proactive and able to effectively manage our cloud environment in ways never before thought possible."*

> Senior Director of Cloud Services, VMware

How CloudHealth works

DATA COLLECTION

CloudHealth ingests and aggregates data from the multiple data streams you use across cost, usage, performance, and security, to provide a holistic view of your applications, infrastructure, and business. Using open APIs, CloudHealth seamlessly collects data from cloud providers, such as Amazon Web Services, Microsoft Azure, and Google Cloud Platform. It will also connect and pull data from third party tools that you use for application performance management, configuration management, security management, etc., allowing you to use CloudHealth as your single source of truth for multicloud management across your entire portfolio. CloudHealth integration partners include Alert Logic, Ansible, Chef, Datadog, New Relic, and Wavefront by VMware.

LOGICAL BUSINESS GROUPINGS

CloudHealth lets you view and sort information based on dynamic business level groups called Perspectives. These business groups are the lenses through which you view your infrastructure (e.g. Cost Center, Lines of Business, Environment). With these Perspectives, you can evaluate your environment holistically in order to see what's working, what's not, and be able to adapt quickly.

Services Beyond the Platform

CloudHealth by VMware provides a world-class cloud success service to make sure our customers get the most value out of their cloud investment. As part of the service, you are granted exclusive access to a Technical Account Manager and Corporate Account Manager who will act as trusted advisors of the platform and secure the alignment of your business goals and objectives. It also includes comprehensive training and education, onboarding, ongoing enablement, and technical support. Additionally, we offer professional services that help you accomplish tasks that you don't have the time and resources for internally, while taking your cloud governance and optimization to the next level.

"CloudHealth support is extremely responsive and was one of the key factors in our decision to go with CloudHealth."

DIETER MATZION | Chief Architect, Adstream

"As a company grows, CloudHealth is right there with you. The team does a fantastic job putting recommendations into action."

JEANNIE FINKS | Strategic & Technical Operations Director, Strategic PMO, Acquia

"Having a dedicated technical account manager is one of my favorite parts of CloudHealth. Our technical account manager has been very quick to understand our business and expedites our ability to visualise what we have in the cloud."

MARK CROWLEY | Chief Architect, Adstream
